

Fish Creek Water Supply System

The town of Fish Creek receives its water supply from Battery Creek Reservoir, located on Battery Creek. The reservoir has a capacity of 123 ML and allows water harvested in winter/spring to be stored and then supplied to customers in summer/autumn.

The Fish Creek water supply system also provides water supply to rural customers, who account for approximately 40% of total supply system demand in an average year.

Water Supply Information

Water resources held by South Gippsland Water for the Fish Creek Water Supply System are shown below. Approximately 9% of the available annual entitlement has been used from Battery Creek Reservoir in the current year to date (Jul-Sep 2022). This entitlement is a legal right to access water, subject to availability.

Water Component	Maximum Annual Entitlement	Volume Extracted 2022-23	Volume Remaining 2022-23
Battery Creek Reservoir	251 ML	22 ML	229 ML

Water Consumption

Monthly water consumption for the Fish Creek Water Supply System in the year to date has been below the average demand over the last five years. It is expected that demand will be close to the historical average for the remainder of the year.

Further Information:

- Battery Creek Reservoir was 100% full at the end of October.
- Volumes shown in the storage outlook are start of month values in megalitres (ML), where 1 ML is equivalent to 1 million litres (or roughly one Olympic sized swimming pool).

Climate Conditions

Forecast climate conditions for the coming three months have considered the Bureau of Meteorology's seasonal climate outlook for the region and local climate conditions in the year to date. Winter/spring rainfall in the year to date has been similar to the long-term average, and the Bureau's climate outlook indicates that rainfall over the next three months is likely to be wetter than usual. Air temperature is forecast over the next three months to be warmer than usual for this time of year, and this trend is expected to continue beyond this period. After taking these factors into account, South Gippsland Water is forecasting on the basis of an average climate scenario, which is characterised by streamflows into Battery Creek Reservoir that are close to long-term average values.

Chance of Exceeding Median Rainfall	Chance of Exceeding Median Maximum Temperature	This Year's Spring Rainfall	Likely Outlook Scenario
65-70%	75-80%	Average	Average

Urban Water Restrictions Outlook

The volume in storage outlook for Battery Creek Reservoir for the period November 2021 to October 2022 indicates that storage levels are expected to remain above water restriction triggers over the coming year under the anticipated average climate scenario. If conditions were considerably drier than expected, Stage 1 restrictions could be put into effect from mid-summer to autumn 2022.

Based on the volume in storage outlook and the Bureau of Meteorology climate forecast, no water restrictions are anticipated for the remainder of the year at the current time. However, it should be noted that Fish Creek (Battery Creek Storage) is a small system and can change quickly in the event of sustained dry conditions for only a few months. South Gippsland Water's Permanent Water Savings Plan applies to all customers over the outlook period.

Climate Scenario	Outlook		
	1 Jan 2023	1 Apr 2023	1 Jul 2023
Wet	PWSP	PWSP	PWSP
Average	PWSP	PWSP	PWSP
Dry	PWSP	PWSP	PWSP

Permanent Water Savings Plan

Action Plan

A list of priority actions for this supply system prior to the next update of the Urban Water Strategy in 2027 is presented below. Further information on actions can be found in our [2022 Urban Water Strategy](#) and our [Price Submission 2020-2023](#) publication on our website. Victoria's [permanent water savings rules](#) are always in place in South Gippsland, saving water on an ongoing basis. For additional tips about how to save water see our [smart water advice](#).

Action Name	Timing
Water awareness and efficiency programs	Ongoing
Leak reduction	Ongoing
Reuse opportunities	Ongoing
Update water security outlook	Every November
Planning for long term options as per the Urban Water Strategy	2022-2027

The information provided in this water security outlook is intended as a guide only. An update will be issued if conditions change during the outlook period.
