

## Tarra River Water Supply System

The Tarra River Water Supply System supplies water to the townships of:

- Yarram;
- Alberton;
- Port Albert; and
- Surrounding rural communities.

Primary supply is from a diversion weir on the Tarra River, with backup supply from a groundwater bore. Both sources of water are transferred to a storage basin, with a capacity of 30 ML. This storage allows water supply to be maintained during short periods of low river flow during drought.

## Water Supply Information

Water resources held by South Gippsland Water for the Tarra River Water Supply System are shown below. Only 12% of the available annual entitlement has been used from the Tarra River in the current year to date (Jul-Sep 2023), with none of the annual groundwater licence used over the same period. This entitlement is a legal right to access water, subject to availability.

Water Component	Maximum Annual Entitlement	Volume Extracted 2023-24	Volume Remaining 2023-24
<b>Tarra River</b>	853 ML	104 ML	749 ML
<b>Groundwater Bore</b>	214.2 ML	0 ML	214.2 ML

## Water Consumption

Monthly water consumption for the Tarra River Water Supply System in the year to date was higher than the average demand over the last five years. Water consumption is expected to remain close to the historical average for the remainder of the year.

## Further Information:

- The most recent records for the Tarra River upstream of the diversion weir show that it was flowing at an average of 57 ML/d during October. This is above the 5 ML/d flow threshold to activate groundwater pumping, which is used to deal with water shortages.
- The Yarram storage basin was 100% full at the end of October.
- Unregulated river flows are difficult to forecast and because of this SGW has only forecast the next 3 months. The graph is formatted to highlight low flow behaviour.
- Units are in megalitres per day (ML/d), where 1 ML is equivalent to 1 million litres (or roughly 40% of an Olympic sized swimming pool).

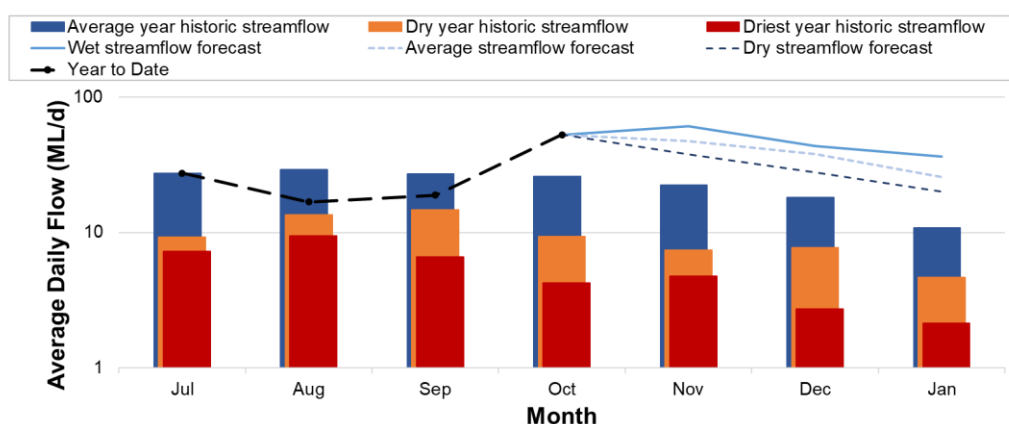

## Climate Conditions

Forecast climate conditions for the coming three months have considered the Bureau of Meteorology's seasonal climate forecast for the region and local climate conditions in the year to date. Winter/spring rainfall in the year to date has been similar to long-term average, and the Bureau's climate outlook indicates that the next three months are likely to be slightly drier than usual. Air temperature over the next three months is forecast to be warmer than usual for this time of year, and this trend is expected to continue beyond this period. After taking these factors into account, South Gippsland Water is forecasting on the basis of a dry climate scenario.

Chance of Exceeding Median Rainfall	Chance of Exceeding Median Maximum Temperature	This Year's Winter/Spring Rainfall	Likely Outlook Scenario
40-45%	Greater than 80%	Average	Dry

## Streamflow Outlook

Streamflow in the Tarra River is naturally highly variable. For the year to date, streamflows have generally been at or above the historical average. Whilst precisely forecasting streamflow conditions is difficult, streamflow for the outlook period is currently expected to remain above the historical average if the climate conditions continue as expected.

## Urban Water Restrictions Outlook

Based on the streamflow outlook, the demands for water in the year to date, and the Bureau of Meteorology climate forecast, no water restrictions are anticipated for the remainder of the year at the current time. For the climate outlook expected, it is estimated that the groundwater bore entitlement is unlikely to be used in 2023/24. South Gippsland Water's Permanent Water Savings Plan applies to all customers over the outlook period.

Climate Scenario	Outlook		
	1 Dec 2023	1 Jan 2024	1 Feb 2024
Wet	PWSP	PWSP	PWSP
Average	PWSP	PWSP	PWSP
Dry	PWSP	PWSP	PWSP

## Action Plan

A list of priority actions for this supply system prior to the next update of the Urban Water Strategy in 2027 is presented below. Further information on actions can be found in our [2022 Urban Water Strategy](#) and our [Price Submission 2020-2023](#) publication on our website. Victoria's [permanent water savings rules](#) are always in place in South Gippsland, saving water on an ongoing basis. For additional tips about how to save water see our [smart water advice](#).

Action Name	Timing
Water awareness and efficiency programs	Ongoing
Leak reduction	Ongoing
Reuse opportunities	Ongoing
Update water security outlook	Every November
Planning for long term options as per the Urban Water Strategy	2022-2027

The information provided in this water security outlook is intended as a guide only. An update will be issued if conditions change during the outlook period.
