

Be Smart, Choose Tap At The Sustainability Festival

Challenge yourself to keep hydrated and healthy by drinking more water. It's not only good for you, but re-filling your drink bottle using tap water is a sensible and sustainable practice that can save you money.

South Gippslanders are fortunate to have reticulated water supply systems that provide quality tap water; water that originates from picturesque rivers and creeks and catchments of rolling green hills.

The water is treated to ensure it meets Australia's national drinking water standards.

This means that South Gippsland Water's customers, and visitors to the region, can be assured that drinking tap water in South Gippsland is a healthy choice for themselves and their families.

When you have access to top-quality drinking water, it makes sense to fill your drink bottle from the tap. According to the *Be Smart Choose Tap* initiative, on average, one bottle of water can cost the same as getting 6,000 glasses of water from the tap!

Re-filling your drink bottle also means less plastic ending up in landfill or polluting the environment.

Make the most of the environmental and health benefits of drinking tap water at the Sustainability Festival. South Gippsland Water will be there with hydration (water re-fill) stations connected to tap water; bring your drink bottle along and help yourself.
